

Share patient information securely

The faster you can submit information needed for prior authorizations, the faster you can help your patients get the medication they need. Optum® EMR Share lets you share prescription details, lab results and other documentation with Optum Specialty Pharmacy electronically rather than via fax, saving you and your patients time and hassle.

EMR Share:

- Offers a simpler process for sending documents
- Helps reduce errors
- Improves time to therapy and patient satisfaction

Here's how it works

EMR Share is a secure electronic medical record (EMR)-sharing solution for prior authorizations:

- It's HIPAA-compliant and may be used to send health care information from within your secure EMR system.
- It works with any secure direct messaging platform.
- It routes encrypted direct messages through a dedicated server via a DirectTrust address, which then transmits the message safely to Optum Specialty Pharmacy.
- The transmission is secure, with little or no message lag time.

Optum

Strengthen record sharing

If you already have a secure DirectTrust address within your EMR system, you can communicate immediately with any other provider who also has a DirectTrust address. If you don't have a DirectTrust address, contact your EMR vendor and ask how to get one.

“

Direct email is a safe, secure, accurate, cost-effective and fast way to send medical records. There is a verification system in place, so I know for sure the information was received. **I would say it saves 10 minutes for each chart that it is used for, and minutes quickly add up to hours saved in a week.** There is no printing, so it saves money on paper and ink. And it's convenient. The whole process can be done from my desk. No printing, no faxing.
