

Clinical Technology Solutions

Financing your EHR

Health system leaders are reconciling their previous electronic health record (EHR) investments with their organization's strategic roadmap and considering how to approach a transformational investment.

Table of contents

EHR investments must support care delivery evolution

As the modalities in which providers and care teams deliver care continue to evolve, executives have been accelerating key priorities or tactics on their strategic roadmaps or, in some instances, making wholesale revisions. Similarly, patient expectations of their providers have continued to shift.

In response, executive teams are asking:

- Which integrated technology platform should we invest in to support the evolution of care delivery and patient expectations?
- Which investments will accelerate our strategic roadmap?

Where health care technology is falling short/still falls short

Provider and patient alike are expecting improved care delivery and seamless experiences which health care technology is not always enabling.

As health system leaders revisit the strategic priorities and tactics on their multi-year roadmaps, many are reevaluating their EHR platform.

Increasing EHR consolidation among largest vendors

Health systems and large medical groups continue to invest in transformational EHRs, including Epic and Cerner. Based on KLAS survey results and growing evidence pointing toward vendor consolidation, these vendors represent a transformational investment for provider organizations.

A variety of EHR vendors across the industry*

Large health systems consolidating among EHR vendors*

Health systems +\$2B net patient revenue inpatient EHRs (n=131)

Excluding Epic and Cerner, the mid-tier EHR market has opportunity for new capability investment*

Health systems \$200M-\$1.5B net patient revenue inpatient EHRs (n=130)

*KLAS. US Hospital EMR Market Share 2020., April 2020 Methodology: KLAS compiled market share for the top U.S. electronic health record vendors. Based on vendors' number of partnerships across 5,457 acute care hospitals. Insiderintelligence.com. NPR data pulled from Definitive Healthcare.

Confronting the immediate challenge: Capital constraints

For many health systems, razor-thin margins are an ongoing reality. Health system executive teams face a high bar in guiding their organizations toward making appropriate, effective capital investments to support strategic planning.

Are you acting on these issues?

 *Roll over icons for more information*

Increasingly, health system executives are assuming an elevated role as it relates to EHR decisions. How is your organization thinking through these considerations?

Questions leaders should ask when considering a new EHR

Common strategies for financing EHR investments

Historically, health system leadership teams have not pursued transformational EHR investments due to the considerable price tag for implementation. Those who do move forward with this strategy typically consider one of two paths to be able access sufficient capital.

Tap into existing cash on hand

However, most medium-sized health systems aren't equipped with this much cash. Or the funds have already been earmarked for other capital-intensive projects (e.g., building a new wing for an acute facility).

Go to the public markets

Despite interest rates being historically low, this option varies by organization based on its credit rating and ability to meet the payback requirements of preexisting debt.

Factoring in often-overlooked components of EHR financing

Beyond the initial upfront costs of implementing a transformational EHR, there are additional investments and resources executive teams have to consider, including:

- ✓ Staffing backfill
- ✓ Lost productivity
- ✓ Operation infrastructure and change management
- ✓ Access to talent
- ✓ Implementation timeline risk

Managing EHR costs over time

Often overlooked within the forecasted pricing estimates provided by EHR vendors is fluctuation in the annual operating expenses for an EHR.

Most organizations expect to ramp down the number of certified analysts and staff after go-live. But it's not uncommon to find that over time, the number of analysts continues to increase year over year. Reasons include:

- **Surge projects** or optimization requests following go-live
- **Challenges** around capacity and demand management continue post-implementation
- **Access and retention** of skilled IT talent forces organizations to rely on premium cost third party contractors or consultants
- **Turnover and recruitment costs** continue to be high for certified EHR talent

How can health system leaders assess the value of the EHR investment?

Historically, leadership teams have been thrust into the position of forecasting the purported benefits and ROI of an EHR. As most leaders can attest, this process is fraught with challenges. Often, they're trying to discern whether vendors can deliver what they promise.

Health system leaders need to understand how this transformational investment will impact:

While these metrics tell part of the ROI story, it's only part of the equation. Your clinical peers will want to understand the impact of a transformational EHR on quality measures and patient outcomes.

Clinical value of EHR

Along with the financial ROI realized from transformational EHR investment, EHRs unlock clinical benefits as well. According to HealthIT.gov,* EHRs provides value to providers and patients, including:

- ✓ Accurate, up-to-date and complete information about patients at the point of care
- ✓ Quick access to patient records for more coordinated, efficient care
- ✓ Securely sharing electronic information with patients and other clinicians
- ✓ Helping providers more effectively diagnose patients, reduce medical errors and provide safer care
- ✓ Improving patient and provider interaction and communication and convenience

- ✓ Enabling safer, more reliable prescribing
- ✓ Helping promote legible, complete documentation and accurate, streamlined coding and billing
- ✓ Enhancing privacy and security of patient data
- ✓ Helping providers improve productivity and work-life balance
- ✓ Enabling providers to improve efficiency and meet their business goals
- ✓ Reducing costs through decreased paperwork, improved safety, reduced duplication of testing and improved health

Even with years of preparation, there are barriers to success

Songbird Health (pseudonym) spent years, and millions, transitioning to new EHR to create a common and interoperable health technology platform for 21 hospitals and care sites across four states.

Songbird Health launched their EHR implementation in 2018. Despite an aggressive timetable, made more challenging by the global pandemic limiting access to its integration partners to virtual support, Songbird Health decided to move forward with go-live in 2020.

Despite a successful launch, after factoring in expenses from the EHR conversion and COVID-19 pandemic, Songbird Health recorded an operating loss of \$49.2 million in the second quarter, compared to an operating gain of \$8 million recorded in the same period one year prior.

A new path forward with a partnership that removes barriers to success

Solving the affordability hurdle

Our model solves the affordability hurdle and the risk to implementing a new EHR that many organizations couldn't clear in the past.

Day 0 optimization

Optum accelerates ROI through a more efficient implementation with tools that drive Day 0 optimization and improved end user adoption.

Mitigate risk

Optum guarantees cost savings and stability with a long-term partnership through service level agreements.

Our model provides peace of mind by managing downstream financial, staffing and security implications.

Optum Enterprise EHR Services

Optum is invested in creating an innovative, comprehensive EHR-managed services capability using the collective expertise of our clinical, consulting, delivery, technology and operations teams.

Managing inequal demand with more flexible resourcing

A dynamic demand model will help prepare your organization to manage the scale and speed required as part of strategic and operational growth and optimization.

Existing, time-sensitive EHR challenges

- Existing project and request backlog
- Leveraging EHR to support strategic priorities
- Balancing act between “care and feeding” of system and specialized support of innovation, optimization
- Imperative to create a pipeline of cost-effective EHR talent for future growth

Most problems can be solved by continuing to raise the level of fixed capacity or using consultants to meet excess demand. But that will likely worsen the cost-efficiency of IT and EHR for the organization rather than improve it.

Enable hyper-specialization

The right resources/experts at the right time, without wasting capacity/productivity

Specialization:
Traditional approach

Scenario 1: Academic medical center

- Organization is investing in developing oncology service line, including research capability
- Goal is to become a preferred provider for pediatric oncology services
- Organization licenses Epic’s Beacon and Research modules, hires Epic-certified staff to implement and support modules on an ongoing basis
 - Note: Epic Beacon analysts are also certified in Willow or Ambulatory. There will need to be a PharmD as well (resources)
- Over time, team grows to 3 Beacon and 2 Research analysts
- Analysts assume responsibility for break-fix, help desk support, upgrade planning, build, troubleshooting with end users and support a subset of projects

Specialization:
Optum approach

Scenario 2: Optum EHR Center of Excellence supporting EHR clients

- Concurrently supporting organizations with oncology service lines and research imperatives
- EHR analysts maintain dedicated time:
 - Reading white papers
 - Collaborating with medical schools on research underway
 - Developing best practice workflows
 - Developing best practice tools
 - Supporting projects
- Scales lessons learned, research, tool development across EHR cohort
 - Center of Excellence assigns and distributes work to the appropriate team members based on experience and qualification, allowing individuals with specialized skill sets and qualifications to more fully focus on the high-impact EHR responsibilities

Differentiating the Optum Epic Implement and Operate service

Your own EHR instance

The Optum Epic Implement and Operate model provides organizations with a cost-effective path to implementing their own EHR instance. This is not like a Community Connect partnership with Optum (or another provider). This is a wholly self-determined instance in which you hold the licenses.

Implementing an optimized version of your EHR, faster

Optum will go at-risk for go-live cost variances and deploy an experienced implementation team to get your organization live on your EHR, faster. Optum will build an optimized instance using the combination of your EHR's implementation playbook and our unique experience in configuration and workflow enhancement.

Predictable, cost-effectiveness management and unique specialization

Optum will finance the implementation costs for your organization and provide a fixed-fee operating model whereby your instance is centrally managed by the Optum EHR Center of Excellence. This team will use a dynamic, fractional resource model where we take advantage of unused capacity through our broader EHR cohort.
